

TRIDENT @ ACM Multimedia 2026

Tri-modal Deepfake Perception, Detection, and Hallucination Grand Challenge

Rio de Janeiro, Brazil

<https://tridentatmm26mgc.github.io/trident.github.io/>

Overview

The TRIDENT Grand Challenge establishes a new standard for tri-modal explainable forensics by evaluating models across the interdependent dimensions of perception, detection, and hallucination to ensure logical consistency in deepfake identification.

Tracks - Image Video Audio

The TRIDENT Challenge 2026 invites global participation across three modality-based tracks: Image, Video, and Audio.

Grounded in the "forensic triad," the challenge posits that trustworthy AI must yield both correct binary classifications and sound underlying reasoning. We aim to advance the state-of-the-art in justificatory integrity beyond simple predictive accuracy.

Detailed participation guidelines are available on the challenge homepage.

Perception	Detection	Hallucination
Evidence Recognition & Localization: Measures fine-grained artifact recognition through a human-aligned taxonomy.	Forensic Decision Making: Assesses binary classification robustness across diverse forgery techniques.	Reliability and Grounding: Quantifies the alignment between a model's forensic reasoning and observable visual evidence.

Important Dates

Registration Opens (Phase 1)	Apr 3, 2026
Result Submission Opens (Phase 2)	May 8, 2026
Registration Closes	Jun 1, 2026
Result Submission Deadline	Jun 10, 2026
Winners Announcement	Jun 15, 2026

Registration & Enrollment

Registration Form

A participating team must have a responsible team leader who is a faculty member, researcher, or staff member with formal affiliation, and who accepts legal responsibility for the entire team.

About the Publication

- The top entry from each track (Image, Video, Audio) will be invited to the main conference proceedings.
- The paper length is 6 pages + up to 2 additional pages for references only.
- At least one main-conference full registration is required for each accepted paper
